FLOWGUARD: THE RIGHT TO KNOW

AIRFLOW SENSOR

For health protection reasons, users of any welding fume extraction system have the right to know whether the required airflow is achieved.

To fulfil this right, we have developed an airflow sensor, called **FlowGuard**. A green LED indicates the airflow is OK, while a red LED means that the airflow has dropped below the set value.

It is most obvious to mount the FlowGuard on an extraction arm, but it can be used on any other extraction device as well to indicate the airflow at point of extraction.

The FlowGuard meets the British Health and Safety Executive HSG 258 guidelines.

For full information about the FlowGuard, refer to the attached data sheet.

PRICE

You can find the actual price of the FlowGuard on page 20 of the Plant Alkmaar price list.

INSTALLATION

The FlowGuard comes with a clear mounting instruction;

- easy installation
- no electrical wiring
